

2011 THE YEAR OF DISASTERS. AGAIN BIG EARTHQUAKES AND SEAQUAKES HAZARDS FOR HEAVIEST QUAKES WITH MAGNITUDES FROM 7.x to 9.x AND TSUNAMI HAZARD. REGIONS: EQUATORIAL REGIONS IN ASIA and PACIFIC OCEAN, AS WELL AS AT THE EDGE OF ALL THE "PACIFIC PLATE".

EXTREME DANGER: From 16 FEBRUARY 2011 to about 6 SEPT 2011 and 12 OKT 2011 - 12 DEZ 2011

During this time window it is even more dangerous than the 2 tsunamis in 2010 (Chile 2/29/2010 M. 8.8 and Sumatra 10/25/2010 M. 7.8.) In the peripheral regions of the entire "Pacific Plate", and near the equator line (+/- approximately 20-30 degrees of latitude) expected, triggered by severe earthquakes and seaquakes with magnitudes between 7.x to 9.x, which are triggered by the following, extremely dangerous and accurate planetary constellations (conjunctions):

- 17 Feb 2011 NEPTUNE - SUN - EARTH on one line / axis (viewed from above)
- 21 Mar 2011 URANUS - SUN - EARTH on one line / axis (viewed from above)
- 6 April 2011 JUPITER - SUN - EARTH on one line / axis (viewed from above)
- 16 Aug 2011 VENUS - SUN - MERCURY - EARTH on one line / axis (viewed from above)
- 13 Oct 2011 SATURN - SUN - EARTH on one line / axis (viewed from above)

INCLINATION (inclination of the orbital planes of planets to the orbital plane of the earth / ecliptic). With the earth's tilt of 23.5 degrees and the DECLINATION of the PLANET & SUN and the different results in the different seasons, very precise and therefore very dangerous PLANETS - SUN - (PLANETS) - EARTH constellations (= conjunctions):

SHADOW PRINTING - CENTRAL - LINES (= pressure shadow zone latitudes) (side view)

See also Button: "What causes the earthquakes and pressure shadow zone"

DATE	CONSTELLATIONS	DECLINATION	VULNERABLE REGIONS
17 Feb 2011	NEPTUNE-EARTH-SUN	- 12 / - 12 deg S	edge of the Pacific plate
21 Mar 2011	URANUS -SUN-EARTH	0 / 0 deg equator	edge of the Pacific plate
6 Apr 2011	JUPITER-SUN-EARTH	+5 / +6 deg N	edge of the Pacific plate
16 Aug 2011	VENUS-SUN-MERCURY- EARTH	+15 / +14 /deg N	Caribbean, Mexico, Calif./USA
13 Oct 2011	SATURN-SUN-EARTH	- 6 / - 8 deg S	edge of the Pacific plate

Vulnerable regions: All countries on the edge of the "Pacific Plate"
 e.g. JAPAN, CANADA, CALIFORNIA/USA, MEXICO, CENTRAL AMERICA, CARIBBEAN ISLANDS, GUATEMALA, NICARAGUA, PANAMA, COLOMBIA, ECUADOR, PERU, CHILE, NEW ZEALAND, PACIFIC OCEAN, PHILIPPINES, INDONESIA, SUMATRA, THAILAND, MYANMAR, etc.

The epicenter of the severe earthquake with tsunami in northern Sumatra on 12/26/2004 with Magnitude 9.1, at + 3 degrees north (off the coast of Nord-Sumatra). The central pressure-shadow-lines of the SUN on 06/04/2011 at + 6 degrees N, the JUPITER on 06/04/2011 at + 5 degrees N mean that this region is again exposed to serious dangers and that the region from BANDA ACEH (NORTHERN SUMATRA) is threatened and the surrounding regions (Burma / Myanmar, southern Thailand, Phuket, Khao Lak, Krabi, etc.) with a probability of 95%, a new tsunami in 2011 could happen.
